and prophylaxis, e.g. to prevent or delay infection, inflammation or tumour formation. NAC is also known as a death effector filament-forming CED4-like apoptosis protein (DEFCAP). NAC is located on human chromosome 17p13. The present sequence represents a human caspase recruitment domain protein 7, which is used in an example from the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   targeted to a nucleic acid molecule encoding NAC, where the compound specifically hybridises with the nucleic acid molecule encoding NAC and inhibits the expression of NAC. The compound specifically hybridises with at least an 8-nucleobase portion of an active site on a nucleic acid molecule encoding NAC. Also described: (1) a composition comprising (1) and a pharmaceutical carrier or diluent; (2) inhibiting the expression of NAC in cells or tissues comprising ontacting the cells or tissues with (1); and (3) treating an animal having a disease or condition associated with NAC comprising administering (I) to the animal so that expression of NAC is inhibited. (1) has cytostatic, nootropic, neuroprotective and antiinflammatory activities, and can be used in antisense therapy. The antisense compounds (1) are useful for modulating the expression of NAC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    present invention describes a compound (I) 8-50 nucleobases in length
                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sclerosis;
and for treating a disease or condition associated with expression of NAC, e.g. hyperproliferative disease, neurological disease, or a disease us diseased ar disease ard disease. The compounds are also useful as research reagents and kits, or for diagnostics, therapeutics and prophylaxis, e.g. to prevent or delay infection, inflammation or tumour formation. NAC is also known as a death effector filament-forming CED4-like apoptosis protein (DEFCAP). NAC is located on human chromosome 17p13. The present sequence represents human NAC, which is used in an example from the present invention

Identifying modulator of CARD-7 and CARD-5 interaction, by contacting CARD-7 and CARD-5 in presence of test compound, measuring their binding, and identifying modulator, when binding of CARD-7 to CARD-5 is altered.

Disclosure; Fig 1; 43pp; English

```
The present invention relates to methods of identifying compounds that regulate caspase activity using caspase recruitment domain=7 (CARD-7) or caspase recruitment domain=8 (CARD-8). In particular, a method for identifying a compound that modulates the interaction between CARD-8 and caspase-1, pseudo-interleukin-1 (IL-1) beta converting enzyme (pseudoICE) cor ICEBERG is disclosed. CARD-7 and CARD-8 molecules are useful as modulating agents in regulating a variety of Cellular processes including cell growth, cell death, and inflammation. The methods of the invention increase/decrease apoptosis, or compounds that have the ability to induce caspase contration. The methods is increased activation. The methods is not mappropriate inflammation. The methods are useful for treating disorders associated with an undesirably low rate contration. The methods is an electrical associated with an undesirably low rate of apoptosis such as cancer (preferably follicular lymphoma, chronic of apoptosis such as cancer (preferably follicular lymphoma, chronic conference inflammation. The methods are also useful for treating disorders with an undesirably high rates of apoptosis such as immune mediated glomerulonephritis, and arthritis). The methods are also useful for treating disorders with cundesirably high rates of apoptosis such as human immunodeficiency virus (HIV) infection, Alzheimer's disease, spinal muscular atrophy. The conference for syndromes, myocardial infarction, atroke, and various inflammatory disease, aplastic anaemia, chronic neutropaenia, myolodysplastic cylebrates mellitus, multiple solerosis, postables, insular nephritis, allergic rhinitis, food allergies, conjunctivitis, glomerular nephritis, cetc). The present sequence represents human CARD-7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1335 LHFVDQYREQLIARVTSVEVVLDKLHGQVLSQEQYERVLAENTRPSQMRKLFSLSQSWDR 1394

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                              The present sequence is a human NB-ARC and CARD containing protein (NAC) delta isoform. NAC delta isoform represents the NAC splice variant in which one of the splice region is absent in the translated polypeptide. NAC protein comprises a nucleotide binding (NB) domain (also referred as NB-ARC domain), a caspase-associated recruitment domain (CARD) and a TIM-PARC domain). The caspases, cysteine aspartyl proteases, are Brincipal effectors of apoptosis. CARD connealing NAC proteins are used for screening modulators that modulates apoptosis, cytokine production, cytokine receptor signalling and other cellular processes. NAC can act as an immunogen for the production of polyclonal and monoclonal antibodies. It can also be used to diagnose and treat inflammatory disorders such as sepsis, fibrosis and arthritis and cancer pathologies such as adenocarcinomas and leukaemias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The present sequence is human G-protein coupled receptor-8 (GCREC-8)

C protein. The present invention relates to GCREC protein and nucleic acids

C concoling them. GCREC protein, its agonist or antagonist are useful for

C treating diseases or conditions associated with decreased expression or

C treating diseases or conditions associated with decreased expression or

C selected from cell proliferative disorders such as actinic keratosis,

arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, psoriasis,

arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, psoriasis,

ancer, neurological disorders such as epilepsy, stroke, Alzheimer's

C disease, Huntington's disease, parkinson's disease, cardiovascular

C disorders such as hypertension, vasculitis, varicose veins, gastro-

C intestinal disorders such as dysphagia, dyspepsia, anorexia, nausea,

Dancreatitis, autoimmune/inflammatory disorders such as acquired

C intestinal disorders such as dysphagia, dyspepsia, anorexia, nausea,

C intestinal disorders such as dysphagia, dyspepsia, corpus disease,

C intestinal disorders such as dysphagia, dyspepsia, craidiovascular

C intections, trauma and metabolic disorders such as diabetes, obesity,

C infections, trauma and metabolic disorders such as diabetes, obesity,

C cfreec copy is useful to create knock in humanised animals (pigs) or

C crangent animals (mice or rats) to model human disease, for therapeutic

C or diagnostic purposes, for somatic or germline gene therapy, to generate

C sequence, and in molecular biological techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LHFVDQYREQLIARVTSVEVVLDXLHGQVLSQEQYERVLAENTRPSQMRKLFSLSQSWDR 1438

```
The present sequence is a human NB-ARC and CARD containing protein (NAC)

beta isoform. NAC beta isoform represents the NAC splice variant in which

both the splice regions are present in the translated polypeptide. NAC

both the splice regions are present in the translated polypeptide. NAC

ARC domain, a caspase-associated binding (NB) domain (61so referred as NB-ARC domain), a caspase-associated recruitment domain (CARD) and a TIM-

ARC domain. The caspases, cysteine aspartyl proteases, are

principal effectors of apoptosis. CARD containing NAC proteins are used

for screening modulators that modulates apoptosis, cytckine production,

cytckine receptor signalling and other cellular processes. NAC can act as

an immunogen for the production of polyclonal and monoclonal antibodies.

It can also be used to diagnose and treat inflammatory disorders such as

sepsis, fibrosis and arthritis and cancer pathologies such as

sepsis, fibrosis and leukaemias. Note: This sequence is stated as being

the same as that shown as SRQ ID NO:2 (AAY72711) in figure 1A of the

specification. However the sequences differ at several positions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1379 LHFVDQYREQLIARVTSVEVVLDXLHCQVLSQEQYERVLAENTRPSQMRXLFSLSQSWDR 1438

domain (also referred as NB-ARC domain), a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. The caspases, cysteine aspartyl proteases, are principal effectors of apoptosis. CARD containing NAC proteins are used for screening modulators that modulates apoptosis, cytokine production, cytokine receptor signalling and other cellular processes. NAC can act as an immunogen for the production of polyclonal and monoclonal antibodies. It can also be used to diagnose and treat inflammatory disorders such as sepsis, fibrosis and arthritis and cancer pathologies such as adenocarcinomas and leukaemias. Note: This sequence is stated as being the same as that shown as SRQ ID NO:2 (See AAY72669) in page 113-137 of the specification. However the sequences differ at

Vertino PM;

WPI; 2001-290922/30. N-PSDB; AAD03906 Novel gene TMS1, transcriptionally silenced due to increased methylation useful for identifying subject at risk of developing tumor characterized by abnormal methylation, for treating cancer by inducing apoptosis.

Claim 85; Page 123; 124pp; English.

The invention relates to identification of target of methylation-induced abnormal methylation of a CpG island in its 5' regulatory region. TMS1 sensitives of a carboxy terminal caspase-recruiting domain (CARD) and plays a role in induction of apoptosis. TMS1 gene and protein are useful as tools for diagnosing and treating a subject at risk of developing cancer (e.g. breast cancer) characterised by abnormal CpG methylation or abnormally low levels of TMS1 expression products. Unique fragments of TMS1 gene are used as probes. TMS1 gene is useful in gene therapy. TMS1 molecule is also useful for treating abnormal cell proliferation by increasing TMS1 polypeptide level to an above normal level. The CpG

The nucleic acid sequences can be used to produce and isolate full-length gene sequences. They can be used to express proteins, which can be used as tools to find an activity against breast cancer. The sequences can be used in sense or antisense form. They are especially useful for medicaments for gene therapy to treat breast cancer. AP488540-Y48617 represent protein fragments encoded by the expressed sequence tags described in the method
                                                                                                                                                                                                                                                                                                                                                          92 GLHFIDQHRAALIARVINVEWLLDALYGKVLTDEQYQAVRAEPINPSKMRKLFSFTPAWN 151
                                                                                                                                                                                                                                                                                                           9
             island region of TMS1 or its fragments are used to study the methylation patterns apart from any coding region contained in it. The present sequence is alternatively spliced form of human target of methylation-induced silencing-1 (TMS1) protein lacking exon2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rosentahl A;

```
The invention relates to isolated human polypeptides (which may be cytokines) and the polynucleotides encoding them. The protein is useful for identifying a compound which binds to it (e.g. modhlators) agonists. and matagonists). The polynucleotides are useful as an array for mismatch detection. The protein exhibits exhibits activity relating to cytokine, cell proliferation, cell differentiation, antiniflammatory, stem cell growth factor activity, immune stimulating or immune suppressing and activin or inhibin related activities. The proteins (and antibodies raised against them) and nucleic acids are therefore useful in the diagnosis and treatment of diseases and disorders such as cancer, central and peripheral nervous system diseases and neuropathies,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polypeptides and nucleic acids, useful for diagnosis, treatment of inflammatory, autoimmune, neurological, myeloid or lymphoid cell, bone degenerative disorders, cancer and promoting wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                   periodontal disease; fibrosis; reperfusion; immune disorder; SCID; severe combined immunodeficiency; infection; autoimmune disorder; multiple sclerosis; rheumatoid arthritis; diabetes mellitus; allergy; asthma; coagulation disorder; haemophilia; sepsis; nephritis; inflammatory bowel disease; food supplement; immunogen.
                                                                                                                                                                                                                                                                                Human, cytokine, cell proliferation, cell differentiation; antiinflammatory, stem cell growth factor; activin; inhibin; cancer; nervous system disease; neuropathy, Alzheimer's disease; neuropathy, Parkinson's disease; Humington's disease; spinal cord disorder; head trauma; stroke; myeloid cell disorder; lymphoid cell disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Wang J;

Isolated intracellular proteins predicted to be involved in regulating caspase activation are used for diagnosis and treatment of e.g. cancer, viral infections, autoimmune diseases, neurological diseases and hematological disorders.

```
The present sequence is that of human caspase recruitment domain 5 (CARD-5), an intracallular protein predicted to be involved in regulating caspase activation. The sequence is predicted from an isolated curva clone (see AAF3007). Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the Fas/APO-1 receptor complex, abnormal activity of the tumour necrosis factor receptor complex, abnormal activity of a caspase involve administering a compound that modulates the activity of activity of CARD-4, CARD-5 or CARD-6. Seq. using central manner disorders include cancer, viral infection, autoimmune disorders include cancer, viral infection, autoimmune disorders include cancer, viral infection, configuratory disorders and immune disorders. CARD-3, -4, -5 and -6 proteins can be used to regulate cell proliferation, cell survival and cell growth. They can also be used to screen drugs or compounds that compute their activity or expression and to treat disorders associated with insufficient or excessive production of CARD-3, -4, -5 or -6 protein, or production of an aberrant protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

Novel gene TWS1, transcriptionally silenced due to increased methylation useful for identifying subject at risk of developing tumor characterized by abnormal methylation, for treating cancer by inducing apoptosis.

Claim 85; Page 114; 124pp; English

```
silencing-1 (TMS1) gene. This gene is transcriptionally silenced due to abnormal methylation of a CpG island in its 5' regulatory region. TMS1 consists of a carboxy terminal caspase-recruiting domain (CARD) and plays a role in induction of apoptosis. TMS1 gene and protein are useful as tools for diagnosing and treating a subject at risk of developing cancer (e.g. breast cancer) characterised by abnormal CpG methylation or abnormally low levels of TMS1 expression products. Unique fragments of TMS1 gene are useful in gene therapy. TMS1 molecule is also useful for treating abnormal cell proliferation by increasing TMS1 polypeptide level to an above normal level. TMC CpG island region of TMS1 or its fragments are used to study the methylation patterns apart from any coding region contained in it. The present sequence is human target of methylation-induced silencing-1 (TMS1)
                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; caspase recruitment domain-5; CARD-5; antiinflammatory; immunosuppressive; caspase; cysteinyl aspartate-specific proteinase; apoptosis; nuclear factor-Kappa B; Nr-KappaB; transcription factor; cell proliferation; gene therapy; immune disorder; chronic inflammatory disease; Hashimoto's thyroiditis; graft rejection; sarcoidosis; atopy; asthma; allerapy; glomerular nephritis; human immunodeficiency virus; HIV; bacterial infection; tuberculosis; lepromatous leprosy; autoimmune disorder; systemic lupus erythematosus; arthritis; cell depletion; neurological disorder; Alzheimer's disease; parkinson's disease; spinal muscular atrophy; haematologic disease; myelodysplastic syndrome; aplastic anaemia; myocardial infarction;
The invention relates to identification of target of methylation-induced
                                                                                                                                                                                                                                                                                                                                                                                                                  1 GLHFIDQHRAALIARVTNVEWLLDALYGKVLTDEQYQAVRAEPTNPSKWRKLFSFTPAWN

control of the control of the control of candary of murine and human caspase recruitment domain (CARD)-5. Caspases caids, of murine and human caspase recruitment domain (CARD)-5. Caspases corporates and caspases are central to the apoptotic caspases interact with other caspases via their CARDs and different caspases interact with other caspases via their CARDs and different caspases interact with other caspases via their CARDs and different caspases interact with other caspases via their CARD-5 is an intracellular protein that is predicted to be involved in regulating intracellular protein that is predicted to be involved in regulating caspase activation. CARD-5 activates the nuclear factor-kappa B (NF-CARD-7 and itself CARD-5 can, therefore, modulate CARD-5 activity and repapable is the CARD-5 can, therefore, modulate CARD-5 activity and control of the protein to them and modulate their activity and for cappable antibodies and and modulate their activity and for detecting the presence of CARD-5 in a sample. CARD-5 polypeptides, can be used to treat immune disorders such as asthma and allenty, glamerular disorders, antibodies and modulaters of CARD-5 polypeptides.

CC an be used to treat immune disorders such as chronic inflammatory diseases and disorders, Habimoto's thyroiditis, graft rejection, carcidosis, atopic conditions (such as asthma and allensy), glomerular compluing tuberculosis and lepromatous leprosy) and in screening and chection assays. Modulators of CARD-5 activity or expression are also expension and arthritis, cell depletion, neurological disorders, such as systemic lupus creating autoimmune disorders, such as systemic lupus contentions and arthritis, cell depletion, neurological disorders, such as mychomera's such as any dispase, such as mychopic and appartic such an emphasic such as any end and appartic managemental muscular artophy, and ansense and appartic such as any end and appartic such an emphasic such as any end and appartic such an emphasized such as any end and appartic such an empha

                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates the DNA and their encoded proteins, where the proteins contain at least one PYD (pyrin) domain. These can be used to treat diseases associated with impaired intracellular signal transduction, particularly inflammation such as psoriasis, arteriosclerosis, bacterial or viral infections (particularly meningitis art premental, multiphe sclerosis, rheumatoid arthritis, asthma, sarcoidosis, glomerulonephritis and osteoarthritis, and also Alzheimer's and Parkinson's diseases. The present sequence is a protein of the

The present invention relates to methods of identifying compounds that regulate caspase activity using caspase recruitment domain-7 (CARD-7) or caspase recruitment domain-8 (CARD-8). In particular, a method for identifying a compound that modulates the interaction between CARD-8 and caspase-1, pseudo-interleukin-1 (IL-1) beta converting enzyme (pseudoICE) or ICEBERG is disclosed. CARD-7 and CARD-8 molecules are useful as methods in regulating a variety of cellular processes including cell growth, cell death, and inflammation. The methods of the invention are useful for identifying compounds that have the ability to induce caspase of increase/decrease apoptosis, or comprise the ability to induce caspase activation. The methods are useful for treating a disorder associated with inappropriate apoptosis or inappropriate inflammation. The methods of vith inappropriate apoptosis or inappropriate inflammation. The methods are useful for treating a disorder associated with inappropriate apoptosis or inappropriate inflammation. The methods of vital infections, autoinfmune diseases caused by low levels of apoptosis or viral infections, autoinfmune diseases caused by low levels of apoptosis (e.g. systemic lupus erythematosus, immune-mediated glomerulonephritis, and arthritis). The methods are also useful for treating disorders with undesirably high rates of apoptosis such as human immunodeficiency virus (HIV) infection, Alzheimer's disease, Parkinson's disease, amylotrophic aleras sciences for propertion anamnia associated with chronic virus forms of cerebellar degeneration, anamnia associated with chronic virus forms of cerebellar degeneration, anamnia associated with chronic virus forms of methods are also useful for treating diseases are also were the above the apoptosis of apoptosis such as mania associated with chronic virus forms of cerebellar degeneration, anamnia associated with chronic virus forms of the properties of apoptosis of the properties of apoptosis of the properties of apoptosis of the properties of apo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                disease, aplastic anaemia, chronic neutropaenia, myelodysplastic syndromes, myocardial infarction, stroke, and various inflammancory disorders (e.g. Crohn's disease, reactive arthritis, insulin dependent diabetes mellitus, multiple sclerosis, psoriasis, graft rejection, allergic rhinitis, food allergies, conjunctivitis, glomerular nephritis, etc). The present sequence represents human CARD-5. The sequence encoding CARD-5 is used to identify cDNA encoding CARD-7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           111 GLHFIDQHRAALIARVTNVEWLLDALYGKVLTDEQYQAVRAEPTNPSKMRKLFSFTPAWN 170

The invention relates to identification of target of methylation-induced silencing-1 (TMS1) gene. This gene is transcriptionally silenced due to cahornal methylation of a CpG island in its 5' regulatory region. TMS1 consists of a carboxy terminal caspase-recruiting domain (CARD) and plays a role in induction of apoptosis. TMS1 gene and protein are useful as a role in induction of apoptosis. TMS1 gene and protein are useful as abnormally low levels of TMS1 as subject at risk of developing cancer (e.g. breast cancer) characterised by abnormal CPG methylation or abnormally low levels of TMS1 expression products. Unique fragments of TMS1 gene are used as probes. TMS1 gene is useful in gene therapy. TMS1 molecule is also useful for treating abnormal cell proliferation by increasing TMS1 polypeptide level to an above normal level. The CpG increasing TMS1 polypeptide level to an above normal level. The CpG patterns apart from any coding region contained in it. The present sequence is human target of methylation-induced silencing-1 (TMS1) exon3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 THEIDQHRAALIARVINVEWLEDALYGKVLTDEQYQAVRAEPTNPSKMRKLFSFTPAWNW 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cancer-associated nucleic acid molecules (N) and proteins (P), where the cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens the colon cancer antigens the colon cancer antigens have cytostatic activity and can be used in gene therapy and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome contract affect the activity of P by expressing inactive proteins or to that affect the activity of P by expressing inactive proteins or to cample ment the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinems and cancers. AAH37196 to AAH37704 and AAB77789 represent sequences used in the exemplification of the present invention. N B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The present sequence is that of mouse caspase recruitment domain 5 (CARD-S), an intracellular protein predicted to be involved in regulating caspase activation. The sequence is predicted from an isolated cDNA clone (see AAF30008). It shows 71.8% amino acid identity to human CARD-5 (see AAF30008). Methods of diagnosing and treating patients suffering from a clisordar associated with an abnormal level or rate of apoptoric cell death, abnormal activity of the FaAPA00-1 receptor complex, abnormal activity of the FaAPA0-1 receptor complex, abnormal activity of the sappase involve administering a compound that modilates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6 e.g. using catolimized activity of CaRD-3, cancer, viral infection, catolimman disorders and immune disorders include cancer, viral infection, ciliammatory disorders and immune disorders. An enactological disorders, ciliammatory disorders and immune disorders. At -5 and -6 coll growth. They can also be used to screen drugs or compounds that modulate their activity or expression and to treat disorders associated with insufficient or excessive production of CARD-3, -4, -5 or -6 protein, or production of an aberrant protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated intracellular proteins predicted to be involved in regulating caspase activation are used for diagnosis and treatment of e.g. cancer, viral infections, autoimmune diseases, neurological diseases and
    immune disease; inflammation; antitumour; antiseptic; immunomodulator; antiinflammatory; apoptosis; diagnosis; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3 HFIDQHRAALIARVTNVEWLLDALYGKVLTDEQYQAVRAEPTNPSKMRKLFSFTPAWNWT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to identification of target of methylation-induced ablormal (TMS1) gene. This gene is transcriptionally silenced due to abnormal methylation of a CpG island in its 5' regulatory region. TMS1 consists of a carboxy teminal caspase-recruiting domain (CARD) and plays a role in induction of apoptosis. TMS1 gene and protein are useful as tools for diagnosing and treating a subject at risk of developing center (e.g. breast cancer) characterised by abnormal CpG methylation or abnormally low levels of TMS1 expression products. Unique fragments of TMS1 gene are used as probes. TMS1 gene is useful in gene therapy. TMS1 molecule is also useful for treating abnormal cell proliferation by increasing TMS1 ploypeptide level to an above normal level. The CpG island region of TMS1 or its fragments are used to study the methylation patterns apart from any coding region contained in it. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel gene TMS1, transcriptionally silenced due to increased methylation useful for identifying subject at risk of developing tumor characterized by abnormal methylation, for treating cancer by inducing apoptosis.

This gene is transcriptionally silenced due to abnormal methylation of a CpG island in its 5' regulatory region. TMS1 consists of a carboxy terminal caspase-recruiting domain (CARD) and plays a role in induction of apoptosis. TMS1 gene and protein are useful as a cole for diagnosing and treating a subject at risk of developing cancer (e.g. breast cancer) characterised by abnormal CpG methylation or abnormally low levels of TMS1 gene is useful in gene therapy. TMS1 molecule is also useful for treating abnormal cell proliferation by increasing TMS1 polypeptide level to an above normal level. The CpG increasing TMS1 polypeptide level to an above normal level. The CpG patterns apart from any cooling region contained in it. The present sequence is mouse target of methylation-induced silencing-1 (TMS1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              62
                                                                                                                                                                                                                                                                                                                                                                                              Novel gene TMS1, transcriptionally silenced due to increased methylation useful for identifying subject at risk of developing tumor characterized by abnormal methylation, for treating cancer by inducing apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3 HFIDQHRAALIARVTNVEWLLDALYGKVLTDEQYQAVRAEPTNPSKWRKLFSFTPAWNWT

The invention discloses the isolated polypeptides, and encoding nucleic acids, of murine and human caspase recruitment domain (CARD)-5. Caspases (Cysteinyl aspartate-specific proteinases) are central to the apoptotic crospases interact with other caspases via their CARDs and different lead to the morphological changes seen in cells undergoing apoptosis. Caspases sinteract with other caspases via their CARDs and different cubrypes of CARDs may confer binding specificity. CARD-5 is an intracellular protein that is predicted to be involved in regulating caspase activation. CARD-5 activates the nuclear factor reappa B (NF-CARD-7 and itself. CARD-5 can, therefore, modulate CARD-5 activity and NF-CARD-7 and itself. CARD-5 can, therefore, modulate CARD-5 activity and centenging the presence cell growth and cell death and be used in compounds which bind to them and modulate their activity and for compounds which bind to them and modulate their activity and for can be used to treat immune disorders such as chronic inflammatory diseases and disorders. Hashimoro's thyroiditis, graft rejection, diseases and disorders. Hashimoro's thyroiditis, graft rejections conditions (such as asthma and allergy), glomerular ceptuiding tuberculosis and lepromatous leprosy) and in screening and detection assays. Modulators of CARD-5 activity or expression are also useful for treating autoimmune disorders, such as systemic lugues crythematosus and arthritis, cell depletion, neurological disorders, such as myelodysplastic syndrome and applastic characterial infarmacoular atrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cologic diseases, such as myelodysplastic syndrome and aplastic a, myocardial infarction and stroke. The sequence presented is the caspase recruitment domain-5 (CARD-5) protein
             graft rejection;

The polymucleotide sequence given in AAA78381 to AAB24604. Human secreted human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins have activities based on the tissues and calls the genes are expressed in Examples of activities include: cytostatic; antianaemic; antidiabetic; antiinflammatory; ophthalmological; antirheumatic; antidiabetic; antiporatitic; antimicrobial and antiparkinsonian. Human secreted protein polynucleotides, polypeptides, antagonists and/or agonists may be useful in treating, preventing, and/or diagnosing other disorders and/or conditions such as: (a) cancers; (b) disorders of the immune system; (c) angiotogenesis disorders; (b) disorders of the immune system; (c) angiotogenesis disorders; (f) diseases associated with increase apoptosis; (g) neurological diseases; and (n) infectious diseases. They are also used to promote wound healing.

AAA78372 to AAA78380 and AAB24436 represent sequences used in the exemplification of the present invention
Forty seven human nucleic acids encoding secreted proteins, useful in the treatment, prevention and diagnosis of cancers, disorders of the immune system, anglogenesis disorders, neurological diseases and hyperproliferative disorders.
                                                                                                                                                                                                                                                                                                                                                            Human; secreted protein; cytostatic; antianaemic; antidiabetic; antiinflammatory; ophthalmological; antirheumatic; antiarthritic; antiparamatory; ophthalmological; anti-heumatic; antiangiogenic; cardiant; anti-HIV; nootropic; neuroprotective; antimicrobial; antiparkinsonian; cancer; mimune system disorder; angiogenesis; hyperproliferative disorder; apoptosis; neurological disease; infectious disease; wound healing.
                                                                                                                                                                                                                                                                                                                          Human secreted protein sequence encoded by gene 12 SEQ ID NO:139
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rosen CA, Endress GA, Soppet DR, Ni J;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 57, Application US/09340620A

Sequence 57, Application US/09340620A

Patent No. 648233

GENERAL INFORMATION

APPLICANT: Bestin, John

TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED PROTEIN FAMILY AND USES THERE
FILE REFERENCE: 07344-124001

CURRENT APPLICATION NUMBER: US/09/340,620A

CURRENT PILING DATE: 1999-06-28

PRIOR APPLICATION NUMBER: US 09/245,281

PRIOR FILING DATE: 1999-02-05

PRIOR FILING DATE: 1998-06-17

PRIOR FILING DATE: 1998-06-17

Sequence 31, Application US/09340620A

Patent No. 6482933

GENERAL INCORMATION:

APPLICANT: Bertin, John

TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED PROTEIN FAMILY AND USES THERE

FILE REFERENCE: 07344-124001

CURRENT APPLICATION NUMBER: US/09/340,620A

CURRENT APPLICATION NUMBER: US 09/245,281

PRIOR FILING DATE: 1999-02-05

PRIOR FILING DATE: 1998-12-08

PRIOR FILING DATE: 1998-12-08

PRIOR PELLOR OWNERS: US 09/207,359

hypothetical protein PA0234 [imported] - Pseudomonas aeruginosa (strain PA01)
C;Species: Pseudomonas aeruginosa
C;Date: 15-Sep-2000 #sequence_revision 15-Sep-2000 #text_change 31-Dec-2000
C;Accession: F83616
R;Accession: F83616
R;Stover, C.K.; Pham, X.Q.; Erwin, A.L.; Mizoguchi, S.D.; Warrener, P.; Hickey, M.J.; Badman, S.; Yuan, Y.; Brody, L.L.; Coulter, S.N.; Folger, K.R.; Kas, A.; Larbig, K.; Lim invarve, Acc, 959-964, 2000
A;Title: Complete genome sequence of Pseudomonas aeruginosa PA01, an opportunistic path A;Accession: F83616
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A;Status: preliminary

                                                                                                                                                                                                                                     SUBDIVIT: Interacts strongly with caspase 2, weakly with caspase 9 and with APAFI in a cytochrome c-inducible way leading to the formation of an apoptosome. This interaction may be ATP-dependent. SUBCELDULAR LOCATION: Cytoplasmic.
ALTERNATIVE PRODUCTS:
                                                                       Kochrer K., Beyer A., Mewes H.-W., Gassenhuber J., Wiemann S., Submitted (SEP-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Able to form cytoplasmic structures termed death effector filaments. Enhances APAFI and cytochrome c-dependent activation of pro-caspase-9 and consecutive apoptosis. Seems to bind ATP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILARITY: Contains 1 DAPIN domain.
SIMILARITY: Contains 1 NACHT domain.
SIMILARITY: Contains 1 CARD domain.

-!-SUBUNT: Isoform 1 oligomerizes and binds to SFRS9/SRp30C and als interacts with NPM1. Isoform 2 binds caspase-2, caspase-8 and CED 3 and inhibits caspase-8 activity.
-!-SUBCELDULAR LOCATION: Nuclear or cytoplasmic. Isoform 1 is found in nucleoli and nucleoplasm. Isoform 2 is cytoplasmic.
-!-ALTERNATIVE PRODUCTS:
EVent-Alternative splicing; Named isoforms-2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

TUCAN/CARDINAL and DRAL participate in a common pathway for
modulation of NF-kappaB activation.";
FEBS Lett. 521:165-169(2002).
-!- FUNCTION: Inhibits NF-kappa-B activation. May participate in a
requilatory mechanism that coordinates cellular responses
controlled by NF-kappa-B transcription factor. Involved in the
negative regulation of caspase-1.
-!- SUBUNIT: May form homedimers. Interacts with NEMO and DRAL. Binds
to caspase-1, pseudo-ICE and ICEBERG. Interacts with FNBP3 (By

Nature 416:190-194(2002).
-!- FUNCTION. Activates pro-caspase-1 and pro-caspase-8. Potentiates
- CASP-8-mediated apoptoosis. Activates NF-kappaB (By similarity).
-!- CATALYIT ATP + a protein = ADP + a phosphoprotein.
-!- CATALYIT Edids to CFLAR/CLARP and CASP1 via their CARD domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           28-FEB-2003 (Rel. 41, Created)
28-FEB-2003 (Rel. 41, Last sequence update)
10-0CT-2003 (Rel. 42, Last annotation update)
Receptor-interacting serine/threonine protein kinase 2 (EC 2.7.1.37)
RIPK2.

    -!- TISSUE SPECIFICITY: High expression in lung, ovary, testis and
placenta. Lower expression in heart, kidney and liver. Also
expressed in spleen, lymph node and bone marrow.
    -!- SIMILARITY: Contains 1 CARD domain.

Inhibitor of apoptosis protein (IAP) (Inhibitor of T cell apoptosis protein).
Binds to BIRC3/c-IAP1 and BIRC2/c-IAP2, TRAF1, TRAF2 and TRAF5 and TRAF6. May be a component of both the TWFRSF1A and TWFRSF5/CD40 receptor complex (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic (Probable).
FTM: Autophosphorylated (By similarity).
STMILARITY: Belongs to the Ser/Thr family of protein kinases.
SIMILARITY: Contains 1 CARD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDILINE=21264704; PubMed=11058605; Inchara N., Ogura Y., Chen F.F., Muto A., Nunez G.; Inchara N., Ogura Y., Chen F.F., Muto A., Nunez G.; Inchara N., Ogura Y., Chen F.F., Muto A., Nunez G.; Inchara Seponsiveness to bacterial lipopolysaccharides."; J. Biol. Chem. 276:2554(2001).

-!- FUNCTION: Enhances capase-9-mediated apoptosis. Induces NF-kappa-B activity via RICK (CARDIAK, RIP2) and IKK-gamma. Confers reponsiveness to intracellular bacterial lipopolysaccharides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -!- SUBUNIT: Self-associates. Binds to caspase-9 and RICK by CARD-CARD
                                                                                       я.

--- SUBCELLULAR LOCATION: Cytoplasmic.
--- TISSUE SPECIFICITY: Highly expressed in adult heart, skeletal muscle, pancreas, spleen and ovary. Also detected in placenta, lung, liver, kidney, thymus, testis, small intestine and colon.
--- SIMILARITY: Contains 1 CARD domain.
--- SIMILARITY: Contains 1 NACHT domain.
--- SIMILARITY: Contains 9 leucine-rich (IRR) repeats.
               SEQUENCE FROM N.A., AND MUTAGENESIS OF VAL-41 AND LYS-208
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MIM; bubsdu; .
